

Netherlands wall-mounted energy storage battery factory

Overview

Where is the Netherlands' largest stand-alone battery energy storage system located?

Dispatch, a Dutch battery developer, is going to construct the Netherlands' largest stand-alone Battery Energy Storage System (BESS). This groundbreaking 45MW/ 90MWh utility-scale BESS will be located in the port area of Dordrecht, on a 6000m² site and will be used for grid stabilization by storing excess energy from renewable sources.

Which battery storage facility is built by RWE in the Netherlands?

The battery storage facility in Moerdijk is the second battery storage facility to be built by RWE in the Netherlands: the company started construction of a battery storage facility in Eemshaven at the beginning of the year with an installed capacity of 35 MW and a storage capacity of 41 MWh.

What is a battery storage system & why is it important?

Construction is set to commence in the coming months and arranged in partnership with infrastructure fund EPICo², Macquarie Capital and lender ABN Amro. To fully utilise the potential of renewable energy, battery storage technology is becoming crucial for balancing supply and demand in the electricity grid.

How many MWh can a Bess battery store?

The sophisticated BESS consists of 144 cutting-edge lithium-ion sealed cells -known as Fluence cubes - boasting a formidable capacity of 90MWh. In relative terms, this battery can store power sufficient to fulfill the energy demand of approximately 21,500 homes each day.

How does a battery storage system work?

The storage system will be connected to the high-voltage grid via the existing grid connection. Highly reactive control technology and inverters with grid-

forming functionality enable the battery storage system to provide instantaneous reserve power.
