

New Zealand s commercial and industrial photovoltaic energy storage

Overview

Commercial solar investment can help New Zealand businesses reduce energy costs, lower their carbon footprint, and build long-term sustainability. And it has never been more affordable.

What are the different types of commercial solar systems in NZ?

Below are the four most common system types seen across NZ commercial properties. Rooftop solar is the most widely adopted commercial solar solution - and with good reason. It makes use of existing space, avoids the need for resource consent in most cases, and allows businesses to generate power right where it's used.

Are commercial solar systems delivering real results for New Zealand businesses?

From horticulture in Hawke's Bay to logistics in South Auckland and processing in Canterbury, commercial solar is already delivering real results for New Zealand businesses. These systems are built to match the demands of each site - scalable, efficient, and designed with operational realities in mind.

3.

How long does a commercial solar system last in New Zealand?

Most commercial solar systems in New Zealand now achieve simple payback within 4-7 years, depending on: After the system has paid for itself, your business continues to benefit from free, clean energy for the remainder of the system's lifespan - typically 20-25 years.

Does New Zealand have a solar market?

However, the New Zealand solar market has obstacles to navigate, with the country having some of the lowest penetration rates for rooftop solar. Gillies highlights that only 3% of New Zealand households have solar PV modules, whereas its neighbour, Australia, has 40%.

How many solar panels are installed in New Zealand?

In October 2022, Electricity Authority data showed 43,641 solar systems installed across New Zealand, adding up to 240 MW. This makes up an estimated contribution of under 1% of total electricity consumption. Globally, solar PV uptake has increased significantly over the past decade.

Does New Zealand have a solar system?

Most businesses in New Zealand are already connected to the national electricity grid, so most of the systems we install are grid connected. By adding PV (photovoltaic) solar panels to your building, you can generate direct current (DC) energy from the sun.

Commercial & Industrial Energy Storage System by POWERSYNC

POWERSYNC(TM) designs and builds advanced energy storage which is deployed in demand response enabled microgrid solutions for commercial and industrial (C& I) applications.

Product Information

LIQUID COOLING ENERGY STORAGE SYSTEM

EMS real-time monitoring
No container design
flexible site layout

Cycle Life
≥ 8000

Nominal Energy
200kwh

IP Grade
IP55
