

# **New energy storage power generation in the Netherlands**

## Overview

---

Will RWE build a battery energy storage system in the Netherlands?

Utility and IPP RWE will build a 7.5MW/11MWh battery energy storage system (BESS) in the Netherlands with grid-forming inertia capabilities.

Are renewables the future of electricity generation in the Netherlands?

In the first half of 2024, renewables accounted for 53% of the electricity generated in the Netherlands. While the best months for solar generation are behind us, inshore and offshore wind energy generation will also likely break production records. However, such growth is only partially exploited.

How much energy storage does the Netherlands need?

To achieve its renewable energy targets, reports in 2021 indicate that the Netherlands will need to install between 29 and 54 gigawatts (GW) of energy storage capacity by 2050. Storage with efficient management systems and digital controls is a crucial element of a reliable, flexible and affordable energy system.

Is there a roadmap for energy storage in the Netherlands?

In the Netherlands, there has also historically not been a roadmap or detailed industrial strategy with supportive legislation, policy, taxation reliefs, or investment incentives for the energy storage market.

What are the laws & regulations on energy storage in the Netherlands?

No specific laws & regulations: In the Netherlands, energy storage is not described in Dutch laws and regulations as a specific item. Standard requirements: It has to meet standard requirements for production and consumption and some specific technologies that are part of the energy storage system must comply with standardisation.

Are grid managers allowed to buy energy in the Netherlands?

Grid managers are not allowed to buy energy on the market themselves in the Netherlands. Examples of regional grid managers are Liander and Stedin. entrepreneurs who want to become active across borders. Prohibits the placing on the market of certain batteries manufactured with mercury or cadmium. Encourages the recycling of (parts of) batteries.
