

Newly launched energy storage battery

Overview

The new battery product known as Megapack 3, which Tesla revealed late Monday, is a bid to lure utilities and data center developers that are desperate for power. Megapack 3 stores around 1 megawatt-hour more electricity than Tesla's largest existing offering and promises a longer lifespan. Is CATL launching a new energy storage system?

CATL (SHE: 300750) has rolled out a new energy storage system called Tener Stack in a bid to consolidate its position in the sector. The Chinese battery giant launched the Tener Stack at the battery storage show in Munich, Germany, on May 7, calling it the world's first production-ready 9 MWh ultra-high-capacity energy storage system solution.

What is Envision's new energy storage system?

A company representative mentioned that in 2023, Envision set a new standard in energy density with its 20-foot container, 5 MWh battery energy storage system. The latest capacity breakthrough was made possible by the use of large-capacity cells, system integration, compact design, and further optimization within the container.

How much power does Envision's new battery system deliver?

Their latest system, equipped with 700 Ah lithium iron phosphate batteries from AESC (in which Envision has a major stake), delivers more than 8 MWh, exceeding prior achievements.

What is AI-powered energy storage & X?

At the EESA show, the company also launched its AI-powered "energy storage + X" solution for grid-scale battery storage systems capable of facilitating sizing and construction of projects as well as their operation, specifically their lifecycle services and trading in the electricity spot market.

Will Tesla's Energy-Storage business take a shot in the arm?

Investors will have to wait awhile to see any impact on Tesla's balance sheet, though. Both products will be manufactured in Tesla's Megafactory near Houston and won't enter production until the latter half of 2026. Tesla's energy-storage business could use a shot in the arm after reporting two consecutive quarters of declining numbers this year.

Are there any new battery additions?

No new battery additions have been reported. Tim De Chant is a senior climate reporter at TechCrunch. He has written for a wide range of publications, including Wired magazine, the Chicago Tribune, Ars Technica, The Wire China, and NOVA Next, where he was founding editor.

Newly launched energy storage battery

World's 1st 8 MWh grid-scale battery with 541 kWh/m² energy ...

Shanghai-based Envision Energy unveiled its newest large-scale energy storage system (ESS), which has an energy density of 541 kWh/m², making it currently the highest in ...
