

# North Korean energy storage vanadium battery manufacturer

## Overview

---

Standard Energy plans to market its vanadium-ion battery this year, as the local regulators are readying a first-ever industry standard for vanadium-ion batteries in the world. The review process is under way, and Standard Energy is expecting the result in the near future. Are vanadium ion batteries safe?

Vanadium-ion batteries, on the other hand, have zero risk of ignition, and also have high efficiency. Its energy efficiency is at the highest level compared to any other types of batteries in the world.

Can a vanadium battery supply be securing a supply chain?

Vanadium is a common material worldwide, and it's even found in Korea. So securing a vanadium supply is not that difficult. Demand for lithium-ion batteries is soaring, especially with the strong EV demand, and the preexisting battery technologies inevitably come with supply chain risks since they use rare earth materials.

Does standard energy have a solution to a vanadium-ion battery problem?

Standard Energy believes it has a solution to that issue. Punctured, beaten, dropped and even directly exposed to fire through numerous safety tests by multiple institutions, the company's vanadium-ion battery did not show any sign of ignition, according to the company. But that's not all there is to it.

How much money is being made for Advanced Energy Storage Technologies?

Through a competitive solicitation, over US\$5 million is being made available for developers of advanced energy storage technologies in New York. H2 Inc, a South Korean vanadium flow battery company, has begun construction of a factory with 330MWh annual manufacturing capacity.

Why are lithium ion batteries more popular than vanadium batteries?

The lithium-ion batteries have been predominant in the market despite ignition risks because there was no alternative that could catch up with its

high energy efficiency and production quantity. Vanadium-ion batteries, on the other hand, have zero risk of ignition, and also have high efficiency.

Does Korea have a lithium ion battery market?

Korea's domestic ESS market is close to non-existent at the current point mostly due to the previous lithium-ion battery fires, while the global market is growing very fast. So we are receiving a number of offers from companies in the United States and the European region, especially from power suppliers and EV charging service providers.
