

# **Norway s new photovoltaic power station generates electricity**

## Overview

---

How many solar power plants are there in Norway?

In 2023, most of the solar power in Norway is installed on the roofs of households and industry, and primarily cover their own consumption. As of 31 March 2023, there are no dedicated solar power plants in Norway. During 2022, approximately 153 MW of new solar power was installed in Norway.

Is solar power a viable option in Norway?

Norwegian hydropower is currently so cheap that power companies do not consider it attractive to build solar power plants in Norway. In recent years, however, companies have started selling or leasing solar systems to private customers and businesses in Norway. Despite the low energy prices, solar power is growing rapidly in Norway.

How do power plants in Norway work?

Many power plants in Norway have storage reservoirs and production can therefore be adjusted within the constraints set by the licence and the watercourse itself. Wind and solar power are intermittent; electricity can only be generated when the energy is available.

What can Norway do with solar energy?

In Norway, production of solar energy can offload the tapping of water reservoirs. Smart grids and digitization: Most Norwegian households will soon be equipped with smart meters. Smart grids make it easier to coordinate storage and consumption of energy.

How many thermal power plants are there in Norway?

There are 30 thermal power plants in Norway, with a total installed capacity of about 642 MW. The power balance expresses the relationship between production and consumption and indicates whether the Norwegian power system is a net exporter or importer in a particular year.

How many hydropower plants are there in Norway?

Hydropower is still the mainstay of the Norwegian electricity system. At the beginning of 2023, there were 1 769 hydropower plants in Norway, with a combined installed capacity of 33 691 MW. In a normal year, the Norwegian hydropower plants produce 136.49 TWh, which is about 88% of Norway's total power production.
