

# Outdoor Mobile Power Communication BESS

## Overview

---

Do mobile Bess applications have communication interfaces?

This thesis project, carried out at Northvolt Systems, aims to analyze the existing and readily used communication interfaces for a specific set of mobile BESS applications. The analysis is performed by a literature review of typical mobile BESS applications with the identified corresponding communication interfaces.

What applications can a mobile Bess support?

The project aims to perform a thorough analysis of the various communication interfaces applicable to the applications that a mobile BESS can help support, of which, some typical VMS applications are construction sites, festivals, and EV charging stations.

What are the environmental conditions of a mobile Bess system?

Due to the flexible and mobile nature of mobile BESS, the environmental conditions can differ greatly for each system depending on the respective mobile deployments. Ranging from high temperatures and high humidity to the inverse during the same season, monitoring and control of the TMS is critical.

What are the benefits of using a small mobile Bess?

The benefit of using a small mobile BESS that is most often promoted is reduced fuel consumption and associated greenhouse gas emissions. Gensets in temporary power applications often run at 30% load or less.

Are mobile Bess applications compatible with smart grid applications?

The analysis is performed by a literature review of typical mobile BESS applications with the identified corresponding communication interfaces. Among the identified interfaces is the IEC 61850 standard, which shows suitability in smart grid applications, enabling interoperability, vendor-

independence, and standardization.

Which is a typical utility Bess use case?

Which is one of the most typical utility BESS use cases, providing setpoints through operator or automatic control as in ancillary services. The three mobile storage applications presented in this section were identified and chosen through some application criteria. The applications presented focuses mainly on industrial and utility cases.
