

# Outdoor power supply duration

## Overview

---

How many Watts Does a portable power station use?

Every portable power station comes with a rated capacity, typically measured in watt-hours (Wh). This figure represents the total amount of energy stored in the battery. For example, an OUPES portable power station with a 1,000Wh capacity theoretically supplies 1,000 watts for one hour or 100 watts for ten hours.

How do you store a power station?

If you're not using it, store your power station in a cool, dry place with a 50% charge. (Remember, don't store it anywhere where it will overheat or freeze.).

Is a permanent power outlet necessary?

For lighting, lawn tools used on a regular basis, or power needs for outbuildings, you need a permanent power solution for safety. This can involve an outdoor outlet addition to your home's main structure, or wiring run remotely to an outbuilding.
