

PV plus energy storage subsidies

Overview

The Dutch government has earmarked €100 million (\$106.7 million) of subsidies for the deployment of battery storage alongside PV projects. The funds are part of a €416 million subsidy program announced last year to alleviate grid congestion. How much does a kWh subsidy cost?

The initial estimate for the subsidy is €0.14-29 per kWh of energy discharged. Independent research and consultancy organisation CE Delft has been heavily involved in the analysis of the scheme until now.

How much subsidy does Thuringia offer?

Thuringia: The subsidy amount for photovoltaic systems equipment can reach 30%, the subsidy amount for energy storage facilities can reach 30%, and the maximum subsidy amount for a single project is 100000 euros. Projects with a total expenditure of less than 1000 euros will not be subsidized.

Are residential batteries a good investment?

While storage fared better than solar and wind, homeowners interested in residential batteries face dwindling opportunities. A solid-state battery co-created by the Pacific Northwest National Laboratory and Ampcera, Inc.
