

Photovoltaic battery cabinet supply chain model

Overview

What is a PV supply chain?

Therefore, a PV supply chain is mainly composed of a photovoltaic assembler (will be called assembler or PA in this paper) and its C-Pi module supplier (will be called supplier or MS). In practice, a large PA normally sources from a large MS who does not supply to the competing PAs of similar market scale.

What are the components of a solar photovoltaic system?

The core component of a solar photovoltaic system (i.e. a PV system) is the solar module or panel. The manufacturing process of the solar modules includes: C-Pi purification, ingot molding, wafer slicing, cells manufacturing and panel/module producing.

Is there a coordination mechanism for PV supply chain?

Chen and Su (2014) explored a coordination mechanism for the PV supply chain considering the strategic consumers' behavior under the government's subsidy policies and considered its impact on the decisions of the supply chain stakeholders in China.

What happens if all PV supply chains are 'rational'?

It is noted that if all the PV supply chains are 'rational' (i.e., all PV supply chains adopt a centralized strategy), the HS scenario will degenerate into the pure CS scenario and result in the profit reduction of all PV supply chains comparing to those of the pure DS case. 5.2.

How does a decentralized PV supply chain work?

In a decentralized PV supply chain, a module supplier and a PV system assembler make optimal decisions in a Stackelberg way (von Stackelberg, 1934, Fudenberg and Tirole, 1993, Gibbons, 1992, Osborne and Rubenstein, 1994).

Should governments regulate PV supply chains?

For governments, there are opportunities on both the supply side and the demand side of the PV supply chains to regulate or encourage the PV industry to move toward a healthier industrial structure.

Photovoltaic battery cabinet supply chain model

[Photovoltaic-energy storage-integrated charging station ...](#)

In this study, an evaluation framework for retrofitting traditional electric vehicle charging stations (EVCSS) into photovoltaic-energy storage-integrated charging stations (PV ...
