

# Photovoltaic panel silicon wafer quotation and price

## Overview

---

How are PV solar cell silicon wafer price index developments calculated?

PV Solar Cell Silicon Wafer Mono price index developments are calculated from multiple separate sources of data to ensure statistical accuracy. A mono wafer is a type of wafer used in the production of photovoltaic (PV) solar panels. It is made from mono-crystalline silicon, which is a type of silicon that is made from a single crystal of silicon.

How much does polysilicon cost in China?

While Shanghai Metals Market (SMM), EnergyTrend, InfoLink and PVinsights all saw a stable Chinese price for polysilicon used to make n-type ingots, the Silicon Branch of the China Nonferrous Metals Industry Association again observed a price increase this week: for n-type chunks by CNY0.3 to CNY0.5 per kg, for granules even by CNY1.5/kg.

Which solar panel and polysilicon pricing report adheres to Iosco reporting requirements?

The only solar panel and polysilicon pricing report that adheres to IOSCO reporting requirements. The OPIS Solar Weekly Report is the first and only solar panel and polysilicon pricing report to follow the International Organization of Securities Commissions' (IOSCO) requirements for fair and transparent pricing.

How much does non Xinjiang polysilicon cost?

Currently, non-Xinjiang polysilicon with traceability data generally carries a quoted premium of RMB 3–5/kg. Polysilicon prices in dollar terms are prices for polysilicon with non-China origins in dollar terms, not translated from RMB prices.

What is a mono wafer solar panel made of?

It is made from mono-crystalline silicon, which is a type of silicon that is made

from a single crystal of silicon. Mono wafers are used to produce solar cells that are highly efficient and have a long lifetime. To make a PV solar panel, a thin slice of mono wafer is coated with a thin layer of conducting material, such as aluminum or copper.

How much does a non Xinjiang wafer cost?

Currently, non-Xinjiang wafers with traceability data generally carry a quoted premium of RMB 0.15–0.2/pc. Starting February 2025, spot price updates for 183mm n-type wafers in dollar terms will be introduced. The high prices for M10 PERC and TOPCon cells is based mostly on those of Southeast Asian origins.
