

# **Photovoltaic panels plus several inverters**

## Overview

---

Multiple inverters can be an ideal way to balance the solar power generated by separate solar arrays or optimize the AC loads to the inverters optimally. Having two or more inverters linked and managed centrally is better than having one large output inverter running below 50% power load.

Inverters in the 5kW output range are the most prevalent in domestic installations and, therefore, the most cost-effective installation. Instead of installing one 10kW inverter, installing two 5kW inverters in your system would be more advantageous. 1.

Inverters connected in parallel should ideally be the same make and specification and be designed to communicate with each other. Such an arrangement will.

Inverters have a much shorter lifespan than solar panels, charge controllers, or battery storage systems and will thus fail first during the system's operational life. A single inverter in the system will result in the entire system going out of operation when the inverter.

Investing in a solar-powered future for your home does not have to be done in a big bang approach. You can start with a simple solar array.
