

Price of 12v to 2000v inverter

Overview

How do I create a 12V power inverter system?

To create a 12V power inverter system, you need an appropriately rated inverter, a suitable deep cycle 12V battery, and a suitable set of battery cables. The inverter converts the DC (direct current) power source into an AC (alternating current) power source.

Can I use a 12V power inverter on an RV?

This power inverter features a high surge capacity for products that require power up to 4000 watts to start and an LED readout to monitor amps and voltage. Not for marine use. Use only with 12V deep-cycle lead-acid batteries rated for RV use. To preserve battery life do not discharge battery below 50% charged state.

How long does it take to get a LiTime 2000W inverter?

Delivered in 2-5 business days. The LiTime 2000W Pure Sine Wave Inverter is your go-to power solution for home, RV, and outdoor use. With 2000W continuous power, 4000W peak surge, and pure sine wave technology, it ensures safe, stable power for sensitive devices.

What is a power inverter used for?

This power inverter lets you run power tools, small appliances, and electronics during a camping trip, roadside stop, or power outage by using your vehicle's battery. This power inverter features a high surge capacity for products that require power up to 4000 watts to start and an LED readout to monitor amps and voltage. Not for marine use.

What is a LiTime 12V DC to 120V AC inverter?

The LiTime 12V DC to 120V AC Inverter delivers exceptional performance with its ability to handle 2000W continuous power and 4000W peak surge, making it ideal for running high-power appliances and tools seamlessly, even during

startup surges. Perfect for creating a robust and efficient energy system for your home, RV, or off-grid setup.

How do I Choose an inverter?

The inverter is designed to momentarily provide the rated high demand (e.g., surge power) before returning to the inverter's continuous power rating. When selecting an inverter, ensure that the total power needed for all devices to be connected to the inverter is below the continuous (first) power rating of the inverter.
