

# **Private network communication micro base station**

## Overview

---

What is CUAV LBA 3 UAV communication micro basestation system?

CUAV LBA 3 UAV Communication Micro BaseStation private network micro-base station system is a high-performance UAV long-distance and large-bandwidth link system solution independently developed by Leixun Innovation. It consists of a LBA3 Base, an air terminal, and an AG gateway.

What is a micro base station?

A micro base station is a relatively small-scale base station with a smaller coverage area than a macro base station. It is usually set up in densely populated areas such as indoors, office buildings, shopping malls, subway stations, etc. to provide better signal coverage and capacity support.

What is the difference between a micro base station and a picocell?

Micro base stations can enhance the quality and stability of wireless signals and provide higher data transmission speeds and lower latency. A picocell is a smaller base station with a smaller coverage area than a microcell.

How many types of base stations are there?

Macro cell, Micro cell, Pico cell and Femto cell are 4 types of base stations in wireless communication networks. Macrocell antennas must be properly mounted on ground-based masts, rooftops or other existing structures and at heights for an unhindered, clear view of the surroundings.

What is a macrocell base station?

Macrocell base stations have power outputs of typically tens of watts. Since this type of cell offers the largest coverage area, it is placed in stations along highways and rural areas where large stretches rarely have service within a few kilometers.

What is a pico base station used for?

It is mainly used to provide indoor coverage, such as offices, hotels, hospitals and other places to meet the needs of high-density users. Pico base stations usually have lower power and shorter transmission distance, which can provide more stable and high-quality wireless signals.

## Private network communication micro base station

---

### [CUAV New Industrial LBA 3 Micro Private Network](#)

LBA 3 is a micro base station equipment for medium and long-distance networking communication of UAVs. It has a coverage of 54km. 30Mbps large-bandwidth communication.
