

Saint Lucia environmentally friendly solar system model

Overview

Is Saint Lucia generating 35% of its electricity from renewable sources?

The Government of Saint Lucia has a target of generating 35% of its electricity from renewable sources by 2020. This pristine island currently depends on dirty diesel generators for power, but has ambitious goals to revolutionize its economy with solar, wind, and geothermal energy.

Can solar power revolutionize Saint Lucia's economy?

This pristine island currently depends on dirty diesel generators for power, but has ambitious goals to revolutionize its economy with solar, wind, and geothermal energy. Solar represents the easiest attainable resource, and Saint Lucia is already famous for its sunshine, which draws visitors from around the world.

What are Saint Lucia's environmental priorities?

Saint Lucia's overarching environmental priority remains addressing the adverse effects of climate change, which impacts every area of our sustainable development. Concurrent to the development of the MTDS, Saint Lucia continues to undertake a number of initiatives, projects and programmes that align with the implementation of the SDGs.
