

# **Small Energy Storage Cabinet Cooperation Model**

## Overview

---

Energy trading between community energy storage systems (CESSs) and prosumers has received much attention recently. But few studies have considered the impact of network constraints on.

What is a new energy cooperation framework for energy storage and prosumers?

A novel energy cooperation framework for energy storage and prosumers is proposed. A bi-level energy trading model considering the network constraints is presented. A profit-sharing mechanism is designed with the asymmetric Nash bargaining model. The adaptive alternating direction method of multipliers is applied efficiently.

What is a two-stage model for energy storage sharing?

For example, formulated a two-stage model for energy storage sharing between CESSs and prosumers, where CESSs decide the price of virtual storage capacity in the first stage and prosumers decide the capacities and charging/discharging power in the second stage.

Can a new energy cooperation framework improve the energy economy?

A novel energy cooperation framework for CESSs and prosumers is proposed with an energy cooperation platform as an intermediary, improving the energy economy and solution efficiency.

How can a community energy storage system benefit prosumers?

An applicable way to solve the problem is to build multiple high-capacity community energy storage systems (CESSs) for shared use by prosumers . Both prosumers and CESSs can gain profits from energy sharing.

What is the difference between cooperation and non-cooperation?

In the non-cooperation, prosumers sell the surplus energy to the distribution operator and buy the insufficient energy from the distribution operator. While in the cooperation, the surplus energy is shared with other players and part of

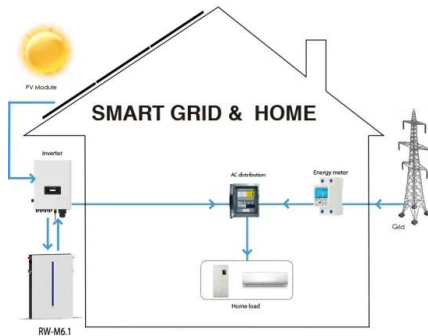

the insufficient energy is filled by other players in cooperation.

What is the energy cooperation framework for cess & prosumers?

Energy cooperation framework for CESSs and prosumers. Formally, according to reference , since the payments between members within the cooperation do not affect the formulation of trading strategies, the energy cooperation problem can be decomposed into two subproblems: the energy trading subproblem and the profit-sharing subproblem.
