

Solar panel shift

Overview

How can a solar plus storage system help with peak load shifting?

Solar plus storage systems like those offered by Lumin can help make peak load shifting easier and far more effective. Implementing your own load shift and peak storage strategies takes time and attention.

Why should you choose a solar panel & battery storage system?

With a solar panel and battery storage system, you can shift from using grid-generated power to stored solar energy during on-peak hours. By shifting to stored energy, you're able to avoid time of use rates without having to adjust your habits. SouthFace Solar & Electric is the leading solar panel and battery storage installer in Arizona.

Why did shift design a 126 kW solar panel?

This Township of Esquimalt building was looking to offset its energy costs, so Shift designed a 126 panel, 54.18kW. This captivating commercial project, installed by Shift, showcases its beauty through 396 impressive panels boasting a capacity of 180.18kW. This project was designed, installed, and commissioned for a home in Saanichton, BC.

What is load shifting and how does it work?

Load shifting is the process of shifting your power generation, which peaks at about 1 or 2 pm, to selling the power back to PG&E from your battery between 4-9pm when power is not being generated as heavily. This way, you can store excess energy during peak generation hours and sell it back during peak demand hours. A battery can ensure your home is resilient from outages.

Why should you choose a solar panel power system?

Through trust, collaboration and solar panel technical innovation, we can protect our planet for generations to come. Enjoy life without costly electricity bills and earn a strong ROI with a high-quality solar panel power system.

Lower operating costs and increase corporate value while contributing to a healthier tomorrow.

Why should you use solar panels in your home?

Basically, use power in your home during the day while the sun is shining and your panels are generating solar. Using your solar by turning on appliances in your home will improve your self-consumption value, lower your electricity bills and improve your payback period.

Solar panel shift

- ✓ LIQUID/AIR COOLING
- ✓ ON GRID/HYBRID
- ✓ PROTECTION IP54/IP55
- ✓ BATTERY /6000 CYCLES
