

# Solar photovoltaic power generation prices in Uruguay

## Overview

---

How is solar radiation measured in Uruguay?

It is based on 15 years of solar radiation data generated with a low uncertainty satellite estimation model , locally adapted to the specific characteristics of the Uruguayan territory . The non-solar quantities were measured on the ground by national measurement networks.

What is the NPV capacity of a solar power plant?

According to the experimental results, the optimized relative net present value ranges from 1.37 to 1.39, with optimized capacity factors around 24%.  
Index Terms—PV power plant, optimization, NPV, Uruguay. Solar photovoltaic (PV) installed capacity is growing at unprecedented rates around the world every year .

Why should a solar PV plant design be optimized?

An optimized PV plant design can provide a better return on investment by leveraging costs and energy production, resulting in higher solar PV capacity factors (the ratio of energy produced to maximum potential production).

## Solar photovoltaic power generation prices in Uruguay
