

Solar system engineering installation

Overview

How do I install a photovoltaic system?

Follow along with the essential steps of photovoltaic systems installation, from mounting solar modules and connecting to the grid, to commissioning and regular maintenance for optimal performance.

How do I install solar panels?

Mounting the Solar Modules: The installation begins with setting up the mounting system, which can be done on rooftops or on ground-mounted structures. The choice of racking depends on several factors, including roof integrity, space, orientation, and exposure to sunlight.

How do you design a solar system?

Designing a solar system involves a thorough process, starting with a consultation to understand your energy needs and goals. After a site assessment, our engineers create a custom solar array design tailored to your property. We then assist with permits and approvals before our experienced installers complete the installation.

What does a solar installer do?

This includes selecting the appropriate number of solar panels, determining the optimal angle and orientation for the panels, and designing the electrical components and wiring. We assist with obtaining the necessary permits and approvals for the installation of the solar system.

How do I design a photovoltaic system?

The first step in the design of a photovoltaic system is determining if the site you are considering has good solar potential. Some questions you should ask are: Is the installation site free from shading by nearby trees, buildings or other obstructions?

Can the PV system be oriented for good performance?

.

What does solar engineering do?

Engineering tasks include the creation of electrical and mechanical designs that ensure the solar installation operates efficiently and meets regulatory requirements. Engineering also involves the integration of solar panels, inverters, and other system components to create a cohesive and effective energy solution.

Efficient Higher Revenue

- Max. Efficiency 97.5%
- Max. PV Input Voltage 600V
- 1200W Peak Output Power
- 2 MPPT Trackers, 150% DC Input Oversizing
- Max. PV Input Current 10A, Compatible with High Power Modules

Intelligent Simple O&M

- IP65 Protection Degree: support outdoor installation
- Smart I-V Curve Diagnosis Function: locate PV string faults accurately and automatically detect faults
- DC & AC Type II SPD: prevent lightning damage
- Battery Reverse Connection Protection

Flexible Abundant Configuration

- Plug & Play, UPS Switching Under 10ms
- Compatible with Lead acid and Lithium Batteries
- Max. 8 Units Inverters Parallel
- AFCI Function (Optional): when an arc fault is detected the inverter immediately stops operation
