

# **Southern Europe Electric Energy Storage Battery**

## Overview

---

How does the EU support a circular battery economy?

This initiative supports the EU's efforts to establish a circular battery economy, benefiting renewable energy storage by promoting more sustainable, long-lasting batteries. The EU is investing in smart grid projects to ensure smooth integration of energy storage with renewables.

How long does a battery last in Europe?

Currently, most installed batteries in Europe are designed to charge and discharge over relatively short time scales. By the end of 2023, the 16 GW of batteries operating across the EU could store about 23 GWh of power, meaning an average duration of about 1.5 hours if charging/discharging at full power.

What are the key market trends for battery storage?

It covers key market trends, with a particular focus on the shift toward utility-scale storage, the continuing growth of residential and commercial installations, and the evolving role of battery storage in supporting Europe's clean energy goals.

Are batteries the key to Europe's decarbonization toolbox?

But with proactive coordination, batteries can continue to serve as one of the most versatile and scalable tools in Europe's decarbonization toolbox. In the years ahead, storage will play a decisive role in making Europe's energy system more resilient, flexible, and ultimately more affordable.

Should battery storage be a secondary consideration in energy planning?

Storage is no longer a secondary consideration in energy planning. It is now essential to determine how far and how fast the power system can decarbonise. To maximise the impact of battery storage, future planning must ensure close alignment between deployment, grid integration, and market

design.

### Are batteries reshaping power markets?

After years of being a niche component of the energy transition, batteries are now entering the mainstream of power markets. Record deployment numbers, driven by renewable integration needs and falling technology costs, are attracting major investments and reshaping energy strategies across the continent.

## Southern Europe Electric Energy Storage Battery
