

# **Sudan wind power photovoltaic power generation and energy storage**

## Overview

---

What is power in Sudan?

Power in Sudan Sudan is a country with immense renewable energy potential, possessing a high hydropower potential based totally on its location on the river Nile and other watersheds, a high wind speed mainly in its northern and western region, and high solar radiation throughout the country.

Why is solar energy important in Sudan?

Solar energy is highly attractive as a primary renewable energy source that can contribute immensely to increasing energy access in Sudan. The location of Sudan as part of sub-Saharan Africa enriches the solar potential. The average temperature ranges from 28 to 39°C.

Does Sudan have wind energy?

As for wind energy, Sudan is one of eight African countries with significant onshore wind capacity. Wind energy has the potential to meet an estimated 90% of the country's annual energy demands . compares the country's estimated onshore wind capacity with that of other African countries . Figure 10.

What are the energy production resources in Sudan?

More than 96% of this capacity was derived from fossil fuels and hydropower; the rest was dependent on RE, viz., solar and biomass . The country started to increase its production from solar resources, leading to an increase in capacity from 14 MW in 2019 to 18 MW in 2020. shows the breakdown of energy production resources in Sudan.

What can Sudan do with abundant onshore wind?

With abundant onshore wind, Sudan can adopt successful African strategies and attract regional and international energy initiatives, such as the Africa-EU partnership program, the Africa Clean Energy Corridor, and Power Africa .

Where does Sudan's electricity come from?

Most of Sudan's electricity generation comes from hydropower, and more than half of the Eastern African region's total oil-based capacity is located in the country. Sudan is also contemplating scaling up projects on solar power in the coming years.
