

The effectiveness of Swiss local energy storage batteries

Overview

The cell manufacturer claims increased performance (more energy delivered, less aging) and reduced costs over the BESS lifetime. This technology has already been developed successfully in US and Australia in multiple utility-scale projects. Does Switzerland's new large-scale battery support the Energy Strategy 2050?

The new large-scale battery for Switzerland in Kappel supports the Energy Strategy 2050 and supports renewable energies.

How will a large-scale storage system help the Swiss power grid?

In this way, the system will help to stabilise the Swiss power grid. With this large-scale storage system, we are making a decisive contribution to the implementation of Switzerland's Energy Strategy 2050, which aims to convert 100 per cent of its energy supply to renewable energies by 2050.

Where in Switzerland will Primeo energy install a battery storage system?

In Kappel, in the canton of Solothurn, we will install one of the largest battery storage systems in Switzerland with a total capacity of 65 megawatt hours. Primeo Energie will use the stand-alone storage system to make energy more flexible and store electricity temporarily and withdraw it again when it is needed.

How will Primeo energy contribute to the Swiss energy transition?

We are delighted to be taking a significant step in the Swiss energy transition together with Primeo Energie. In Kappel, in the canton of Solothurn, we will install one of the largest battery storage systems in Switzerland with a total capacity of 65 megawatt hours.

Will a large battery storage system help stabilise the power grid?

Frederik Süllwald, our Head of Global Sales & Key Account Management, explains: ' Large battery storage systems will play an increasingly important

role in stabilising the power grid in the future. Our stand-alone storage system will help to.

Could a gravitational battery be a solution to energy storage?

Energy storage projects are already underway in the US, southern Africa and Australia. The gravitational battery could also be a solution in some European countries, Piconi believes. For example, in nations that are building new wind farms or large solar power plants, such as Spain or Italy.
