

Türkiye subsidizes new energy storage

Overview

According to Embassy of the Republic of Turkey, Turkey has introduced a number of incentives and regulations to achieve its goal of 80 gigawatt-hours (GWh) of energy storage by 2030, while agreements for the energy sector to set up cell and battery factories have exceeded \$1 billion (TL 35 billion) this year, an association head of the Turkish battery industry said on Dec. 23, 2024, according to the Turkish Embassy in Beijing. How big is Türkiye's energy storage capacity?

Türkiye's 35 GWh storage capacity accounts for grid-scale projects alone. Global energy storage investments have surpassed 150 GWh. Türkiye has already begun installations in Hungary, Bulgaria, and Spain, leveraging its geographic advantage close to Europe.

Where does Türkiye invest in energy storage?

Global energy storage investments have surpassed 150 GWh. Türkiye has already begun installations in Hungary, Bulgaria, and Spain, leveraging its geographic advantage close to Europe. Tokcan highlighted the importance of local expertise in manufacturing, system management, and maintenance to avoid dependency on foreign firms.

Can Türkiye become a regional hub for battery technology?

"We believe Türkiye can become a regional hub for battery technology, and our government is committed to making this a reality," Tokcan said. These efforts will position Türkiye as a leader in energy storage innovation, fostering collaboration and supporting renewable energy goals.

How will Türkiye improve energy security?

The government aims to significantly scale-up solar energy to 52.9 gigawatts (GW) by 2035 from 9.5 GW in 2022. The target for battery storage is 7.5 GW. With these and other clean energy measures, the government is boosting energy security as an integral part of efforts to decarbonize Türkiye's economy by 2053.

How can Türkiye reduce its reliance on imported energy?

As a net energy importer, Türkiye is keen to reduce its reliance on imported energy by increasing its use of renewable sources. By 2035, the aim is to increase the amount of renewable energy to 64.7% of the total energy capacity in Türkiye.
