

# **UK 750kw8400kwh energy storage power station**

## Overview

---

Where is the UK's largest battery energy storage system?

The UK's largest battery energy storage system has gone live in North Yorkshire. Lakeside Energy Park is a 100MW facility in Drax, near Selby, which can provide power to about 30,000 homes a day across England and Wales.

Is the UK a good market for battery energy storage?

The UK is known to be one of the world's most active markets for battery energy storage. In 2022, the market saw a record 800 MWh of new storage capacity being added. This took the UK's operational energy storage capacity to 2.4 GW and 2.6 GWh, spread across more than 160 sites.

Is the UK ready for a new pumped storage hydropower facility?

"This is a historic moment for the UK's energy system. We've not built a new Pumped Storage Hydropower (PSH) facility in nearly 50 years, but with over 10GW and 200GWh of shovel-ready projects, the Hydropower sector stands ready to deliver.

What if the UK has a strong energy storage industry?

If the UK establishes a strong domestic energy storage industry, it can export storage capacity and technologies. Storage would reduce the UK's dependence on costly, polluting and uncertain fossil fuel imports. Great Britain currently has 2.8 gigawatts (GW) of LDES across four Pumped Storage Hydro (PSH) facilities in Scotland and Wales.

How much battery storage capacity does the UK have?

The UK's total battery storage project pipeline currently contains a total of 127GW of capacity. Figure 1 demonstrates the amount of capacity at each development stage as a proportion of the total pipeline. 8% of the capacity pipeline in the UK is operational or under construction, with 31% approved and yet to begin construction.

What technologies can be used for energy storage?

Other technologies include liquid air energy storage, compressed air energy storage and flow batteries, which are currently in development and would benefit from investor support. Large scale storage provides the grid with both security and flexibility to dispatch electricity to manage seasonable peaks or low renewable output over a period of time.
