

# Uruguay s solar-powered

## Overview

---

Uruguay is poised to significantly bolster its renewable energy capacity through a strategic push to integrate additional solar photovoltaic (PV) projects into its energy matrix. This initiative centers on the ambitious goal of adding 200 MW of solar power by the year 2025. Does Uruguay have solar power?

While only about two percent of Uruguay's total energy production comes from solar sources currently, the potential for solar power in Uruguay is encouraging given the country receives an average of 1,700 KW per square meter of sunlight each year.

How much green energy does Uruguay use?

In 2016, even before several more renewables projects went online, it hit 94.5 percent green energy. In 2019, according to an analysis by the Uruguayan company SEG Engineering, the country ran on 98 percent renewable energy.

What percentage of energy is generated in Uruguay?

Hydroelectric accounted for nearly 56 percent of generation, wind 34 percent, bioenergy 6 percent, solar just under 3 percent, with fossil fuel coming in last at 2 percent. Wind energy came in second only to hydropower, accounting for nearly 34 percent of the energy generated in Uruguay that year.

Why is Uruguay a 'relative energy sovereignty'?

Once reliant on exorbitantly priced fossil fuel imports for nearly half of its energy needs, Uruguay has gone from suffering frequent blackouts and power cuts to relative energy sovereignty based almost entirely on electricity generated from a stable mix of wind, solar, hydroelectric, and bioenergy sources.

Is Uruguay a net importer of energy?

Once a net importer of energy, Uruguay now exports its surplus energy to

neighbouring Brazil and Argentina. In less than two decades, Uruguay broke free of its dependence on oil imports and carbon emitting power generation, transitioning to renewable energy that is owned by the state but with infrastructure paid for by private investment.

Is Uruguay a repeatable framework of energy sovereignty for developing countries?

Ramón Mendéz Galain believes so. Uruguay's former national director of energy in the Ministry of Industry, Energy and Mining, who was the impetus for the country's shift away from dirty fuels, has been promoting the country's success as a repeatable framework of energy sovereignty for developing countries.
