Uzbekistan photovoltaic module prices

Overview

What is a large-scale solar PV project in Uzbekistan?

Large-scale solar PV projects have been subject to competitive bidding processes in Uzbekistan since 2019 and an awarded project can sign a long-term contract with NEGU at a fixed tariff, as noted above. The government of Uzbekistan also aims to develop small- and medium-scale solar projects.

Can floating solar PV increase solar PV capacity in Uzbekistan?

For comparison, the area of the hydropower reservoirs are more than 15 times the size of the world's largest solar park in India, which has an installed capacity of 2.25 GW. In this regard, the potential of floating solar PV on the hydropower reservoirs is a realistic opportunity to further increase solar PV capacity in Uzbekistan.

Will Uzbekistan reach its maximum capacity of solar energy?

Nevertheless, a more comprehensive set of policies and support mechanisms will be required to reach Uzbekistan's maximum capacity of solar energy and further increase solar energy toward 2030. The government should consider bundling the range of actions needed to ensure the use of all types of solar energy resources.

What is Uzbekistan's solar energy vision?

It outlines the sustainable energy environment solar energy could deliver and offers a timeline up to 2030. In this vision, Uzbekistan succeeds in maximising the benefits of solar energy capacity for both electricity and heat, making solar energy one of the country's major energy sources.

Can variable solar power be used in Uzbekistan?

variable solar electricity benefits from the local flexibility provided by dispatchable, highly flexible hydropower, thus limiting impacts on the power system. There are currently 25 reservoirs in Uzbekistan, with a total water

surface of 1 500 km², 4 of which are hydropower reservoirs totalling 890 km² (CAWater, 2021).

Do fossil fuel subsidies affect electricity prices in Uzbekistan?

Such subsidies have significantly decreased in Uzbekistan in recent years, from USD 9.0 billion in 2018 to USD 3.8 billion in 2020, but they still amount to 6.6% of total GDP in Uzbekistan (IEA, 2021c). As the power mix in Uzbekistan is dominated by natural gas, fossil fuel subsidies are also reflected in electricity prices. IEA. Licence: CC BY 4.0
