

Wattage of Canadian silicon solar cells

Overview

What types of solar panels does Canadian Solar offer?

Canadian Solar offers a large range of panel options designed to meet different needs and preferences. Their two main residential series—HiKu and HiDM—provide homeowners with options balancing performance and cost-effectiveness.

Why should you choose Canadian Solar?

Canadian Solar's manufacturing process creates consistent performance across each cell in the panel, eliminating hot spots and ensuring maximum power output throughout the panel's lifespan. Canadian Solar offers an excellent balance of quality and affordability.

Where are Canadian solar panels made?

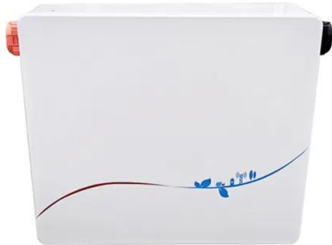

The company operates a 500 MW manufacturing plant in Canada, but has larger operations in China, Indonesia, Vietnam, Brazil, and most importantly for our customers—a state-of-the-art facility in Texas, USA. Founded in 2001 by Dr. Shawn Qu, Canadian Solar brings over two decades of industry experience to every panel they produce.

Is Canadian Solar a good brand?

For more budget-conscious applications, Canadian Solar's HiDM series offers an excellent balance of performance and affordability: While the HiDM series provides excellent value, for most of our customers, we recommend the premium TOPHiKu6 for its superior performance, longer warranties, and better long-term value.
