

# What does the portable battery cabinet include

## Overview

---

These include fireproof lithium storage boxes, heavy-duty steel cabinets, wall-mounted steel units, and versatile lighting solutions with rechargeable batteries. Each is tested to meet strict safety standards and designed to protect your equipment from fire, impact, and electrical hazards. What are battery charging cabinets?

Battery charging cabinets are a type of safety cabinet that's designed especially for lithium-ion batteries. Over the recent years, as the prevalence of lithium-ion batteries has grown in workplaces, battery cabinets have become more popular due to the many risk control measures that they provide.

What is a battery cabinet?

Battery cabinets are a convenient storage solution that encourages staff to maintain the correct handling and storage procedures. By charging and storing batteries in the one location, you are reducing the likelihood of batteries being lost, stolen, damaged or left in unsafe conditions (such as outdoors).

What is a lithium-ion battery cabinet?

The cabinet's key risk control measures include temperature regulation, in the form of natural and/or mechanical ventilation systems, that help keep the lithium-ion batteries cool and dry while they're charging and in storage. Battery cabinets are a type of safety cabinet specifically constructed for lithium-ion batteries.

Are battery cabinets safe?

As lithium-ion batteries have been known to ignite when being recharged, it's important to have a charging station that is free from faults and electrical malfunctions. Battery cabinets are constructed to have intrinsically safe electrical work that reduces the risks associated with recharging.

Why should you have a battery cabinet?

For example, dropping a battery or leaving it in a hot location can result in irreversible damage to the battery cell, which can lead to ignition or explosion. Providing a battery cabinet can reduce these risks by encouraging safe handling and storing practices within your team.

What is a cabinet & how does it work?

Cabinets are equipped with an in-built electrical system that features multiple power points for battery charging within the closed cabinet. In terms of storage, cabinets are usually constructed from sheet steel, with an acid-resistant powder coating.
