

# **What industries can energy storage projects drive**

## Overview

---

Why do we need energy storage solutions?

As the global energy transition accelerates, the need for reliable, scalable and cost-effective energy storage solutions has never been greater.

What is the fastest growing energy storage technology in 2023?

Battery storage in the power sector was the fastest growing energy technology commercially available in 2023 according to the IEA. The demand for energy storage can only continue to grow, and a variety of technologies are being used on different scales. Energy Digital has ranked 10 of the top energy storage technologies. 10. Gravity energy storage.

How many energy storage projects are in the pipeline?

In response to rising demand and the challenges renewables have added to grid balancing efforts, the power industry has seen an uptick in energy storage project activity, with more than 4,000 storage projects in the pipeline globally, according to GlobalData. Credit: Thitichaya Yajampa via Shutterstock.

What are the different types of stationary energy storage technologies?

Stationary energy storage technologies broadly fall into three categories: electro-chemical storage, namely batteries, fuel cells and hydrogen storage; electro-mechanical storage, such as compressed air storage, flywheel storage and gravitational storage; and thermal storage, including sensible, latent and thermochemical storage.

Where will UK energy storage develop a hydrogen storage solution?

UK Energy Storage plans to develop this hydrogen storage solution in three areas of the UK – Dorset, East Yorkshire and Cheshire – with the goal of delivering its first project by 2030. Swiss company Energy Vault is an active developer of gravitational energy storage solutions, particularly in China.

## Why is battery storage so important?

Electrification, integrating renewables and making grids more reliable are all things the world needs. However, these can't happen without an increase in energy storage. Battery storage in the power sector was the fastest growing energy technology commercially available in 2023 according to the IEA.
