

# What inverter should I use for 72v power frequency

## Overview

---

What voltage should an inverter output be?

The inverter output voltage should comply to the standard voltage level and has to be within 228V to 252 V. For U.S., the accepted voltage level is 110V. The inverter output voltage needs to be within 98 V to 122V. The output voltage should be in the range as mentioned above in order for it to be grid or appliance compatible.

How do I choose the best inverter?

Power output is usually the main factor, but there are many others. There are many factors that go into selecting the best inverter (and options) for your application, especially when you get into the higher power ranges (800 watts or more).

How many Hz should an inverter output be?

The frequency of the inverter output must be in the range of 49.7Hz to 50.3Hz or 59.7Hz to 60 Hz according to the region. The variations in the frequency output of the inverter must not be too large and must be in the range specified above. Maximum Open Circuit Voltage.

How to compare solar panels & inverters?

Check for the data on open circuit voltages on the panels and inverters respectively and do the comparison. Rated power output gives the maximum output power in watts of the inverter. DC power from the solar panels is converted to grid/appliance-compatible AC power. The inverter power rating signifies the total wattage of loads it can support.

What type of Inverter should I use for a motor load?

Whenever possible, we recommend using the low-frequency transformer isolated GS or Classic Series models for motor loads. The formula to use for all inverters which are to power motor loads is: Inverter's output AC voltage

multiplied by Locked Rotor Current of motor load equals minimum rating of inverter in VA.

What is the power output rating of an inverter?

The power output rating of the inverter you choose (in VA or in watts) is directly dependant on the load you will be powering. It is absolutely critical that you select an inverter which is powerful enough to operate your specific loads.
