

# **What is the approximate cost per kilowatt-hour of energy storage**

## Overview

---

The cost of a 1 MW battery storage system is influenced by a variety of factors, including battery technology, system size, and installation costs. While it's difficult to provide an exact price, industry estimates suggest a range of \$300 to \$600 per kWh. How much does a 1 MW battery storage system cost?

Given the range of factors that influence the cost of a 1 MW battery storage system, it's difficult to provide a specific price. However, industry estimates suggest that the cost of a 1 MW lithium-ion battery storage system can range from \$300 to \$600 per kWh, depending on the factors mentioned above.

How are battery energy storage costs forecasted?

Forecast procedures are described in the main body of this report. C&C or engineering, procurement, and construction (EPC) costs can be estimated using the footprint or total volume and weight of the battery energy storage system (BESS). For this report, volume was used as a proxy for these metrics.

How do you convert kWh costs to kW costs?

The \$/kWh costs we report can be converted to \$/kW costs simply by multiplying by the duration (e.g., a \$300/kWh, 4-hour battery would have a power capacity cost of \$1200/kW). To develop cost projections, storage costs were normalized to their 2022 value such that each projection started with a value of 1 in 2022.

How much does energy storage cost?

Electricity Energy Storage Technology Options: A White Paper Primer on Applications, Costs and Benefits. EPRI-1020676, Final Report, December 2010, Electric Power Research Institute, Palo Alto, California. RedT Energy Storage. 2018. "Gen 2 machine pricing starting at \$490/kWh."

How much does a battery storage system cost?

While it's difficult to provide an exact price, industry estimates suggest a range of \$300 to \$600 per kWh. By staying informed about technological advancements, taking advantage of economies of scale, and utilizing government incentives, you can help reduce the overall cost of your battery storage system.

How much does electricity cost per kW?

Per International Renewable Energy Agency (IRENA 2012), the \$/kW for electrical and mechanical equipment decreases with increasing power and is estimated to be \$570/kW for a 4 MW system, \$485/kW for a 48 MW system, and \$245/kW for a 500 MW system. There appears to be an inflection point at ~ 50 MW.
