## Overview

---

How does electricity get to your home?

Find out how electricity gets from the producers – such as solar farms, wind farms and power stations - to your home. There are a number of different sources used to generate electricity in the US, and these sources can be renewable or non-renewable.

What is the largest source of electricity in the United States?

As of 2023, natural gas is the largest source of electricity in the U.S., providing about 40% of the nation's power. It surpassed coal as the leading source in the mid-2010s due to its affordability, abundance, and lower carbon emissions compared to coal. Why are wind and solar energy growing so fast?

.

What types of energy sources are used to produce electricity?

Electricity is produced from various sources, including fossil fuels (coal, natural gas, oil), nuclear energy, and renewable resources (wind, solar, hydroelectric, geothermal). The specific combination of energy sources used to generate electricity varies by region, influenced by local resources, infrastructure, and policies.

Is coal still a major source of electricity?

Coal is still the leading fuel for generating electricity in the US. 511 coal powered electric plants supply 34% of the nation's electricity. Coal is the chief source of power in 22 states and the majority provider in 14 more, with concentration across the East Coast, Appalachia, and the Midwest, as well as in Wyoming, Utah, Montana and Arizona. 1.

What is the fastest growing source of electricity?

Wind Wind is the fastest growing source of power, with 843 wind-powered

electric plants supplying 5% of the nation's electricity. Most of this growth is centered around the Great Plains, where constant wind blows steadily over the flatlands.

How many homes are powered by solar energy?

The U.S. has enough solar installations to power over 25 million homes. California, Texas, and Florida lead the nation in solar energy production. Clean and Renewable: Solar energy produces no emissions during operation and relies on an endless supply of sunlight.
