

Why does State Power Investment Corporation want to build 5G base stations

Overview

How much electricity will a 5G base station save a year?

The current 200,000 base stations can save 1.2 billion annually. By the end of this year, 1 million 5G base stations will be built, saving 6 billion in a year. If there are more than 2 million base stations, 12 billion electricity can be saved a year, which is equivalent to China Unicom's total profit in one year.

Why are telecom companies installing indoor 5G base stations?

To solve this, telecom companies are installing indoor 5G base stations, which are growing at a compound annual growth rate (CAGR) of over 30%. For businesses operating in offices, malls, or large commercial spaces, installing indoor 5G solutions can greatly enhance connectivity.

Why do we need a 5G base station?

TrendForce research vice president Kelly Hsieh indicates that, from a technical perspective, the growth in mobile data consumption, low-latency applications (such as self-driving cars, remote surgeries, and smart manufacturing), and large-scale M2M (smart cities) requires an increase in 5G base stations for support.

How to build a strong 5G telecommunications infrastructure?

Networks. Capital investments in network infrastructure are critical to building strong 5G telecommunications infrastructure. Such investments cover cell towers, 5G base stations, security systems, and more. Local policies on rights-of-way, streetlights, and other public assets can play an important role in facilitating network deployment.

How many 5G base stations are there in the United States?

While China leads in sheer numbers, the U.S. is making steady progress. By late 2023, the country had between 150,000 and 200,000 active 5G base stations. The deployment strategy in the U.S. is different from China's, as it

relies on private investment rather than government-led initiatives. Is this article too long?

.

How many base stations will 5G have in 2025?

The U.S. has ambitious plans for 5G expansion, aiming to have more than 300,000 active base stations by 2025. This goal is being driven by investment from private telecom providers and government initiatives like the Rural 5G Fund. For businesses in the U.S., this means increasing access to high-speed connectivity.
